Leading The Industry With Modular Solutions

Modu-Tek Spotlight

Worktables

From lean manufacturing cells to custom assembly fixtures, Tekno's aluminum structures are ideal for any application.

These structures can be built with integrated overhead for lighting and tool rails. Our modular flow racks can also be mounted directly to the units for parts presentation.

Extruded beams allow easy reconfiguration without waste as your needs change. As always, no drilling, tapping, welding or painting required.

Call us today at (270) 773-4181 Ext 8012 to discuss your application.

FEATURED PRODUCT

Tekno Powered Shipping Trailers

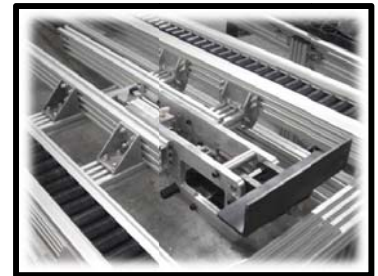

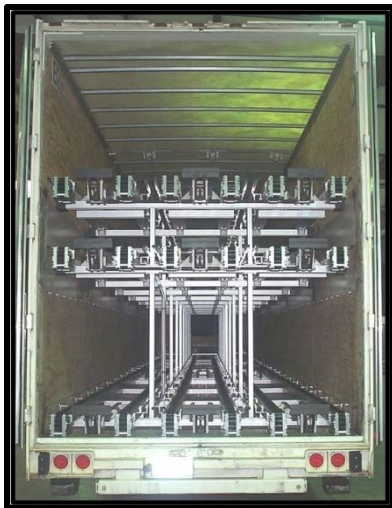

This month we are featuring Tekno's powered shipping trailers. Tekno has recently been supplying powered shipping trailers for many just-in-time automotive suppliers; however, the concept can be applied to any industry. An entire trailer load can be loaded or unloaded in around 1 minute.

Utilizing our standard aluminum conveyors and support structure, Tekno systems are approximately half the weight of comparable steel systems. Expansion joints and shock absorber mounts are only a few of the ways that we cope with the extreme conditions seen by these trailers.

Pneumatic or electrically actuated product stops act to contain product loads during transport. Redundancy features are included to allow loading or unloading even without power.

Tekno can supply complete units including trailer shells or can install conveyors into your existing trailers.

Send your application information to sales@tekno.com today for a quote or call to discuss your application.
