

DECEMBER 2008

LEADING THE INDUSTRY WITH MODULAR SOLUTIONS

MERRY CHRISTMAS FROM ALL OF US AT TEKNO

Keep in mind we will be closed Dec. 24th, 25th and Jan 1st

FEATURED PRODUCT

Tekno's 2060 Synchronous Conveyor

This month's featured product is a variation of one our core products – the 2060 synchronous conveyor. This product utilizes the same screw-shedding rooftop design and roll-formed steel wear strip design as our standard 2060 conveyor. A synchronous version of our 2060 chain is accomplished by installing injection molded dogs into the chain. Each dog has a molded cavity for mounting a reflector for detecting dog position. As pallets enter the conveyor, the bia-speed feature of the chain accelerates the pallet until it reaches the back side of the dogs where it is prevented from accelerating and thus moves at the base chain speed. The bia-speed design of the chain also assists in transitions from the synchronous conveyor section onto a downstream conveyor. Therefore, synchronous and non-synchronous assembly can co-exist in the same Tekno system. Send your application information to sales@tekno.com today or call to discuss your application.

MODU-TEK PROJECT OF THE MONTH

Product Storage and Transfer Carts

This month's featured application comes from one of our Modu-Tek distributors. As a part of their storage, transport and presentation of components to their assembly line, this customer will utilize these enclosed carts. Hinged doors are provided for access to the rear for loading the three shelves; while a purchased roll-up door provides unimpeded access at the assembly station. By combining standard Modu-Tek components with additional purchased parts, our distributor has provided another turnkey solution for their customer.

Send your application photos to components@tekno.com for a chance to be featured in future articles. Modu-Tek – Think it, Build It!
