TEKNO NEWS

Assisting Customers

At Tekno, we are currently working on many new projects. For that, we consider ourselves to be blessed. However, we also recognize that with the current economic situation, everyone is looking to implement cost reduction strategies. We at Tekno are working closely with companies to ease the economic implications of such business decisions. Two ways that Tekno is assisting is through our preventative maintenance programs and through assistance with equipment reconfiguration and moves.

Preventative Maintenance and Maintenance Audit Program -

In the October issue of our newsletter, we outlined this program. Equipment reliability is more important than ever before. Let Tekno assist you in evaluating and maintaining your Tekno equipment. We will work together with your maintenance personnel to keep your Tekno equipment running at its best. A brochure with more information is available at our website. Or feel free to call to discuss how Tekno can assist you.

Equipment Reconfigurations and Moves -

Many companies are facing plant closures and consolidations. Many others are faced with launching new product with little capital expenditure. Tekno is working with these companies to reconfigure and redeploy their existing Tekno equipment. Tekno's modular design allows for modification and reimplementation. Whether your needs are new pallet tooling, additional components, assistance with layout changes within your existing plant, moving equipment from another facility or a complete refurbishment or system reconfigure, Tekno can assist. Our technicians can perform the work on-site at your facility or the equipment can be shipped to our facility for reconfiguration.

Call us today to talk with one of our skilled personnel to discuss how Tekno can assist you with your project.

FEATURED PRODUCT

Tekno's Modular Slat Conveyor

This month's featured product is our modular slat conveyor. Our modular slat conveyors can be utilized for part transportation, part presentation or synchronous assembly lines. These conveyors can be built from readily available stock components. These conveyors can be oriented horizontal (as shown), vertical or at 45° for product presentation to the operator. The heavy duty extruded aluminum side frame houses a UHMW chain carryway. The base chain is an 80 series steel roller chain with attachments for bolting on the slats which can range from 2" to 20'. Our aluminum support extrusions are utilized for the slats and include standard t-slot arrangements for attaching tooling. Conveyor length can vary from 48" to 200'. A brochure is available online in .pdf format.
