

# Tekno Preventive Maintenance Program

## PROGRAM BENEFITS

### **Four Key Reasons You Need Tekno Preventive Maintenance**

#### Minimize Down Time

Down time costs thousands of dollars in Lost production, fines and penalties. Preventive audits and maintenance are the best defenses against down time.

#### Improve Cycle Time

Properly maintained equipment performs better, faster, and more efficiently.

#### Extended Equipment Life

Premature wear can cause costly expenses. We spot potential problems before they happen. Although Tekno equipment is built to last, Tekno Preventive Maintenance can make it last even longer.

#### Reduce Risk of Injury

Improperly maintained equipment and displaced safety devices can cause increased risk of injury. Decreased risk and fewer accidents can reduce worker's compensation costs and insurance premiums.

#### **Annual Audits**

- You receive one to three sessions per year

#### **Equipment Report & Recommendations**

- We address potential down time threats.

#### **Complete Documentation**

- You receive comprehensive maintenance information

#### **Reduce Risk of Injury**

- Properly operating equipment is safer.

#### **Retrofit Opportunities**

- Service sessions can be multi-purpose to reduce travel expenses.

#### **Maintenance & Audit Training**

- Your staff receives free training

#### **Unlimited Hotline Technical Support**

- We're only a quick call away . . . 24/7

#### **Customer Tailored Pricing**

- The program is custom priced to fit your specific equipment and needs.

#### **Outsource System Maintenance**

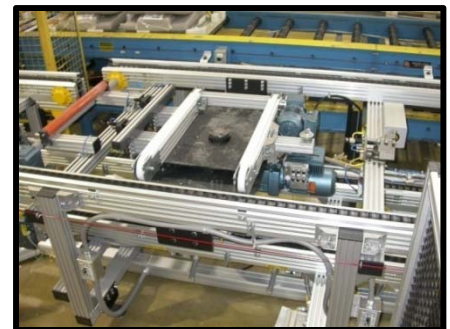

- Don't let corporate downsizing prevent your equipment from being serviced.

#### **Priority Service**

- As a preventive maintenance customer, you receive greater access to our technicians and quicker response time.

# Tekno Preventive Maintenance Program

Tekno Preventive Maintenance is a simple and effective program. With three easy steps, your equipment gets the best service available. . . And you get peace of mind.

## THE AUDIT

For a minimal fee, one to three times per year, Tekno will perform a complete analysis of your equipment . . . Up to as many as 300 specific items. We also analyze your spare parts inventory and recommend safe stocking levels.

## THE REPORT

Once the Preventive Audit is completed, you will receive a concise and thorough Preventive Audit Report. The report itemizes each piece of automation, specifies systems component conditions and makes maintenance recommendations for each specific item.

The Preventive Audit Report also identifies areas showing excessive wear, pin points the causes of wear and advises a course of action to alleviate problems, The report also provides quotes for Preventive Maintenance necessary replacement parts and spare parts inventory.

Within the Audit Report, Tekno recommends a service schedule for your equipment. Based upon the working environment and production loads of your equipment, Tekno schedules one to three Preventive Maintenance Service sessions per year. At this time, we can also schedule additional projects and retrofits.

## THE SERVICE

Tekno Preventive Maintenance covers a multitude of automation items, and begins by focusing on potential down time areas.

During the service, Tekno removes, cleans, inspects chain and wear strips. The internal beam cavities are cleared of debris and cleaned.

Your gearmotors are inspected and lubricated. Tekno repairs and adjusts your shock absorbers and stops.

Tekno inspects, adjust or repairs automation stations such as: lift and transfers, lift and rotates, lift and locates, and lift and tilts.

Your maintenance staff can receive “free training” during the Service Session by providing a maintenance tech to assist. Most importantly, Tekno can teach your staff how to identify potential down time threats before they happen.
